

Akilesh T

Salt Lake City, USA | +1 (385) 461-8890 | Akilesh.cloudops@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Professional Summary:

- DevOps and Cloud Engineer with 6+ years of experience architecting cloud-native infrastructure, driving end-to-end automation, and delivering production-grade CI/CD pipelines across high-velocity engineering teams.
- AWS Certified Developer – Associate with hands-on experience in DevOps and DevSecOps from infrastructure provisioning to secure deployment pipelines, delivering production-grade workloads on AWS without sacrificing reliability or compliance.
- Designed CI/CD pipelines using GitHub Actions, GitLab CI, and AWS CodePipeline — reducing manual release effort by 60% with consistent deployments across dev, staging, and production.
- Streamlined build and deployment automation — including ML delivery pipelines via GitHub Actions, Terraform, and GitOps eliminating manual handoffs and accelerating delivery cycles.
- Built and maintained a core DevOps toolchain (Git, Docker, Kubernetes, Ansible, Terraform, ELK) tailored to team size and project scale. Provisioned AWS environments across multi-service architectures, including event-driven Lambda workflows that replaced manual scheduling and reduced operational overhead.
- Migrated AWS infrastructure to Terraform-driven IaC (VPCs, ELBs, Security Groups, S3, IAM), cutting provisioning time and making environments reproducible and version-controlled.
- Containerized and deployed microservices on ECS and EKS with Docker and Kubernetes, enabling independent scaling per service and maintaining 99.99% uptime across production workloads.
- Managed artifact versioning and dependency lifecycles with Nexus Repository Manager, reducing version conflicts and improving CI build reliability across multiple pipelines.
- Standardized release automation and branching workflows using Python and Bash, improving deployment consistency across teams. Reduced AWS infrastructure costs by 35% through right-sizing, reserved instances, and IaC-driven optimization.
- Integrated SonarQube into CI/CD pipelines for shift-left security, catching quality and vulnerability issues at every commit before they reached production.
- Built production observability with ELK Stack, Prometheus, Grafana, and CloudWatch — enabling proactive alerting, faster incident response, and real-time system health dashboards.
- Led cross-functional DevOps initiatives across Agile and Waterfall cycles, automating build and deployment tasks with Python and Bash to reduce human error and improve deployment reliability across multiple teams.
- Partnered with development, security, and infrastructure teams to embed DevSecOps practices across the SDLC, balancing speed, security, and reliability.

Technical Skills:

- **Cloud Platforms:** AWS (EC2, ECS, EKS, Lambda, S3, SQS, SNS, RDS, VPC, IAM, EBS, ELB, Auto Scaling, Route 53, CloudWatch, CodePipeline), Azure, GCP (Google Cloud Platform)
- **Infrastructure as Code & Automation:** Terraform (modules, remote state, workspaces), Ansible, Helm, CloudFormation (working knowledge), AWS UserData, ArgoCD, Flux, Selenium
- **CI/CD & DevOps Tools:** GitHub Actions, GitLab CI, AWS CodePipeline, Jenkins, Chef
- **Containerization & Orchestration:** Docker, Kubernetes, AWS ECS, AWS EKS, OpenShift
- **Build & Artifact Management:** Maven, Gradle, Nexus, Artifactory
- **DevSecOps & Security:** SonarQube, IAM Policy Management, Shift-Left Security, Zero Trust, Network Security
- **Monitoring & Observability:** Prometheus, Grafana, ELK Stack, AWS CloudWatch, Splunk, AIOps
- **Programming & Scripting:** Python, Java, Bash/Shell, Go, JavaScript, React
- **Version Control & Operating Systems :** Git, GitHub, GitLab, Bitbucket, Linux (Red Hat, Ubuntu), Unix, Windows

- **Methodologies:** Agile, DevOps, DevSecOps, SDLC, Site Reliability Engineering (SRE), Cloud Architecture, Capacity, Planning, Hybrid Cloud, Multi-cloud
- **Databases & Caching:** DynamoDB, Redis, RDS (PostgreSQL, MySQL)

Certifications:

- AWS Certified Developer
- Agile Software Development by the University of Minnesota
- QA Automation Engineer
- AWS Cloud Practitioner Essentials by Amazon Web Services

Education Details:

Master of Science in Information Systems, University of Utah

Bachelor's in Computer Science & Engineering, JNTU

Professional Experience:

Sr. DevOps Engineer

Client: National Financial Partners, Austin, TX |

May 2025- Till Date

Accomplishments:

- Architected a serverless platform on AWS (Lambda, API Gateway, Step Functions) reducing infrastructure overhead by 50% and improving fault tolerance for business-critical APIs.
- Established GitOps practices with ArgoCD, GitLab CI/CD, and Terraform cutting deployment time by 60% and enabling zero-downtime releases.
- Designed and maintained scalable CI/CD and GitOps pipelines with automated testing, vulnerability scanning, and security controls — enabling frequent, reliable releases across multiple teams.
- Implemented DevSecOps automation across delivery pipelines — embedding SonarQube for code quality, secrets management via AWS Secrets Manager and Parameter Store, eliminating hardcoded credentials across 150+ services with automated 24-hour secret rotation.
- Engineered a resilient event-driven API ecosystem using SNS, SQS, and Kinesis — improving system reliability by 40% and reducing API latency by 65% through asynchronous processing.
- Designed and implemented a zero-trust security model using AWS Cognito, WAF, and Shield — achieving 100% compliance with industry security standards and enforcing MFA across all customer-facing applications.
- Implemented semantic versioning in GitLab CI/CD pipelines for container deployments — improving release traceability and reducing version-related deployment errors across environments.
- Integrated AI-assisted DevOps tooling to automate troubleshooting and reduce MTTR by 40%, improving SLA/SLO compliance across production environments.
- Optimized AWS resource usage through right-sizing, auto-scaling, and spot instances — achieving 35% cost savings while implementing FinOps practices and establishing SLOs and error budgets across development teams.
- Led adoption of AWS Well-Architected principles across multiple workloads — ensuring 99.99% uptime through multi-AZ architecture, automated recovery, and CloudWatch monitoring with SLIs/SLOs in an ITIL-aligned ServiceNow environment.
- Built and optimized serverless ETL/ELT pipelines using AWS Glue, EMR, Spark, and Lambda — increasing data throughput by 55% and reducing batch-processing latency from 2 hours to under 10 minutes for real-time analytics and ML model training.
- Established end-to-end observability using CloudWatch, CloudTrail, X-Ray, Prometheus, Grafana, ELK, and Splunk — reducing incident detection time by 60% (from 30 to 12 minutes), enabling proactive auto-scaling and standardizing monitoring configuration across teams.
- Integrated CloudWatch Alarms with Slack and Microsoft Teams — automating real-time incident alerts and triggering Lambda-based runbooks for self-healing remediation of 80% of common infrastructure failures.

DevOps Engineer

Client: Gentiva Health, Atlanta, GA |

Feb 2024- April 2025

Accomplishments:

- Engineered CI/CD pipelines using GitLab CI, GitHub Actions, and AWS ECS/EKS for microservices architecture, improving deployment efficiency by 35% and reducing release failures by 45% through automated testing and rollback mechanisms.

- Provisioned infrastructure using Terraform and Ansible with modular templates, reducing environment setup time by 50%, ensuring configuration consistency, and simplifying onboarding across development teams.
- Engineered scalable event-driven architectures using AWS SQS and Kafka with dead-letter queues, improving system responsiveness by 40% and processing 10M+ events across distributed systems.
- Implemented monitoring and alerting using Prometheus, Grafana, Splunk, and CloudWatch, detecting issues 30% faster and increasing uptime to 99.95% through SRE practices.
- Deployed and managed Kubernetes clusters on AWS EKS and OpenShift, developing Helm charts, automating container deployments, and maintaining fault-tolerant microservices at scale.
- Implemented ML observability using MLflow, OpenTelemetry, and CloudWatch, enabling real-time monitoring of model performance and pipeline health in production.
- Developed Python and Java-based automation scripts to streamline repetitive workflows across 5 development teams, reducing manual effort by 30% and improving developer productivity and code quality.
- Partnered with InfoSec to strengthen IAM, RBAC, and audit logging across AWS environments, ensuring compliance with enterprise security standards and reducing unauthorized access risk.
- Migrated legacy and monolithic systems to AWS using Terraform and Ansible, refactoring infrastructure as code and improving scalability, reliability, and maintainability of critical workloads.

DevOps/Build/Release Engineer

Unvired Software India Pvt. Ltd, |

June 2018- July 2023

Accomplishments:

- Managed end-to-end build and release processes for Java applications across multiple development teams, automating CI/CD workflows using Jenkins and Maven, reducing manual release effort by 40% in an Agile environment.
- Integrated GitHub with Jenkins using webhooks and build triggers, fully automating application builds and deployments, cutting average build-to-deploy time by 30%.
- Provisioned and managed Linux environments on AWS EC2 using Puppet and Bash scripts, enabling rapid infrastructure provisioning, and reducing environment setup time by 50% through lifecycle automation.
- Administered Nexus Repository Manager for Maven artifact management, standardizing dependency sharing across teams and reducing build failures caused by version conflicts.
- Acted as Release Manager for two development teams, coordinating cross-team releases, gathering stakeholder approvals, and maintaining a zero missed-deadline record across production deployments.
- Managed branching, merging, and conflict resolution across Git and Subversion, maintaining code integrity across parallel release branches and ensuring clean post-production merges.
- Converted manual production support scripts into reusable Puppet manifests, reducing configuration drift across environments and cutting repetitive setup work by 35%.
- Built and maintained disaster recovery plans for Jenkins and Bamboo, setting up backup servers, reducing CI/CD downtime risk, and ensuring pipeline continuity during failures.
- Developed Shell and Bash automation scripts for build, deployment, and environment management, standardizing processes across Linux environments and improving release consistency across environments.
- Provided root cause analysis for business-impacting incidents, identifying recurring failure patterns and implementing preventive fixes, reducing repeat incidents across application teams.
